Readiness Score

60

MEDIUM - Needs Improvement ⚠️

Scoring Weights: README (20), License (15), Tests (25), CI/CD (15), Versioning (10), Citation (15)

README 20/20

README file found

PASS

Why it matters: *Complete documentation with both setup and usage examples*

License 15/15

License file: LICENSE

PASS

Why it matters: *License present - software can be legally used and shared*

Tests 25/25

Tests folder: tests

PASS

Why it matters: *Tests present - code functionality is verified*

CI/CD 0/15

Not found

FAIL

Why it matters: *CI/CD ensures automated testing and quality assurance*

Versioning 0/10

Not found

FAIL

Why it matters: *Versioning helps users track changes and cite specific releases*

Citation 0/15

Not found

FAIL

Why it matters: *Citation information enables proper academic attribution*

Fix Checklist Prioritized by Impact

MEDIUM PRIORITY — Automated testing ensures quality on every change

Add CI/CD configuration

Continuous Integration automatically runs tests on every change, ensuring quality.

```
Create .github/workflows/ci.yml:

name: CI
on: [push]
jobs:
test:
runs-on: ubuntu-latest
steps:
- uses: actions/checkout@v2
- run: pip install pytest
- run: pytest
```

MEDIUM PRIORITY — Versioning helps users track and cite specific releases

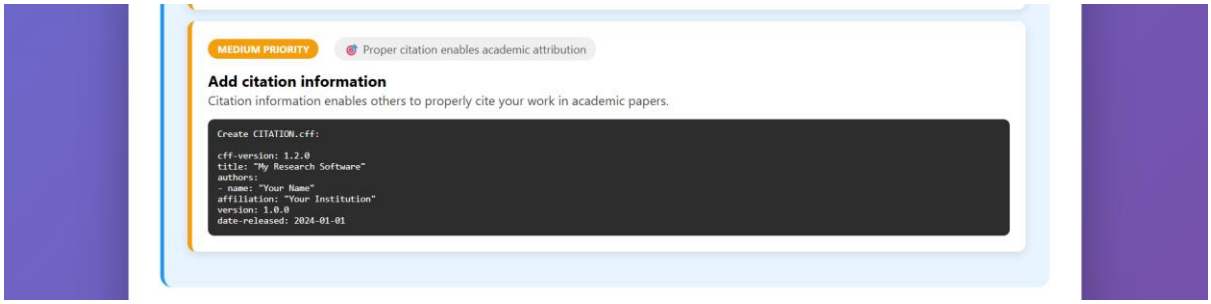
Add version information

Versioning helps users track which release they are using and cite specific versions.

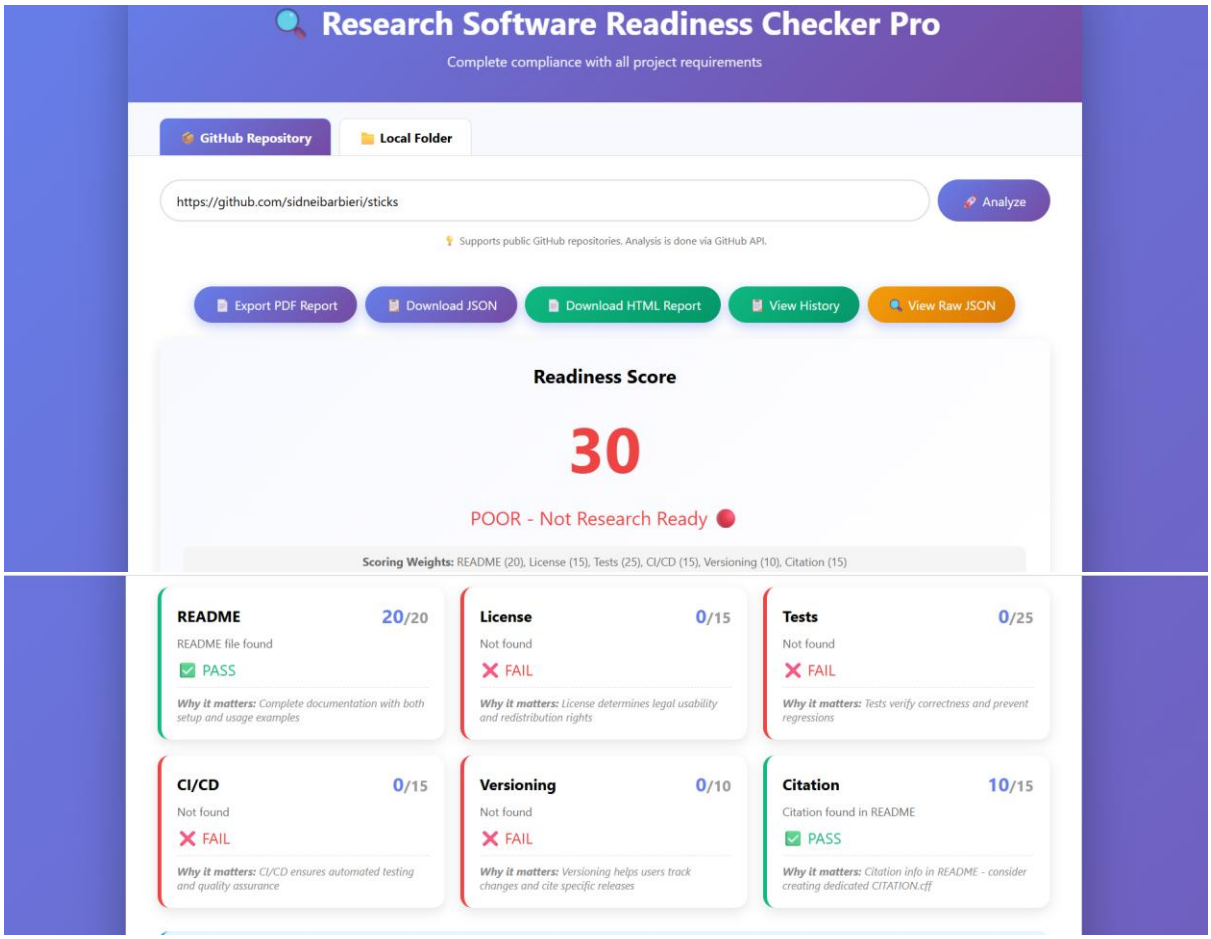
```
Create a VERSION file:

v1.0.0

Or use git tags:
git tag v1.0.0
git push --tags
```



FOR POOR REPOSITORY:



📋 Fix Checklist Prioritized by Impact

HIGH PRIORITY 🎯 Tests ensure reliability and prevent regressions

Add tests to verify your code works correctly

Tests are essential to ensure your code behaves as expected and to catch regressions when making changes.

```
Create a tests/ folder and add test_*.py files:

def test_function():
result = my_function()
assert result == expected_value
```

HIGH PRIORITY 🎯 Enables legal use and sharing of your code

Add a LICENSE file

Without a license, others cannot legally use, modify, or distribute your code.

```
Create a LICENSE file with MIT License:

MIT License

Copyright (c) 2024

Permission is hereby granted...
```

MEDIUM PRIORITY 🎯 Automated testing ensures quality on every change

Add CI/CD configuration

Continuous Integration automatically runs tests on every change, ensuring quality.

```
Create .github/workflows/ci.yml:

name: CI
on: [push]
jobs:
test:
runs-on: ubuntu-latest
steps:
- uses: actions/checkout@v2
- run: pip install pytest
- run: pytest
```

MEDIUM PRIORITY 🎯 Versioning helps users track and cite specific releases

Add version information

Versioning helps users track which release they are using and cite specific versions.

```
Create a VERSION file:

v1.0.0

Or use git tags:
git tag v1.0.0
git push --tags
```

LOW PRIORITY 🎯 Standardized citation format for better discoverability

Create dedicated CITATION.cff file

While citation info is in README, a dedicated CITATION.cff file is more standardized.

```
Create CITATION.cff file (see example above)
```
